

Mulch and WeedRid for Farmers *For Sydney Metropolitan area and around*

CORE has introduced the Sustainable Amendments for Agriculture (SAFA) program to provide farmers, who haven't tried recycled organic products before, to trial quality mulch and benefit from CORE's general product advice and learn how to use the mulch in the WeedRid system.

The WeedRid system has been used in a series of trials around Australia to improve soils and eradicate noxious and problematic weeds. Farmers in the Nepean Valley have significantly improved their soil health and achieved significant eradication of weeds such as stinging nettle and thistle.

Joe & Karen's Success Story

"In addition to weed eradication, the system has significantly improved our soil health, increased yields and dramatically reduced our chemical input costs, particularly with the issues around chemical herbicides at the moment." farmers Joe and Karen from Wallacia said.

Mulch and WeedRid for Farmers For Sydney Metropolitan area and around

Before

Before applying our mulch and WeedRid program farms are often facing:

- ✓ **Poor soils (low carbon/low organic mater)**
- ✓ **High water use**
- ✓ **Weeds proliferation**
- ✓ **High fertiliser costs**

During

CORE provides guidelines and assists with the uses of the material:

- ✓ **Monitoring conditions of stockpile material**
- ✓ **Treating weeds**
- ✓ **Transforming into a rich organic input**

After

Benefits include:

- ✓ **Significant weeds reduction**
- ✓ **Richer soils**
- ✓ **Water savings**
- ✓ **Reduced chemical inputs**
- ✓ **Money savings**
- ✓ **Increased yields**
- ✓ **Beautiful crops**
